

**SUPPLEMENTARY INFORMATION for “High-Density ‘Windowpane’
Coordination Patterns of Water Clusters and their NBO/NRT Characterization”**

F. Weinhold*

*Theoretical Chemistry Institute and Department of Chemistry, University of
Wisconsin-Madison, Madison, Wisconsin 53706 (weinhold@chem.wisc.edu)*

This Supplementary Information (SI) consists of three sections:

- (i) **NPA Charge Distributions** (pp. 2-7), displaying the natural atomic charge (Q_A) values for all monomer units of all windowpane clusters ${}^{q,t,d}W_n$, in tables similar to Table 1 of the main text;
- (ii) **NRT Bond Order Distributions** (pp. 8-15), displaying the NRT bond orders $\{b_{O\cdots O}\}$ and associated $R_{O\cdots O}$ distances (Å) for all O–H \cdots O hydrogen bonds of all windowpane clusters ${}^{q,t,d}W_n$, in tables similar to Table 2 of the main text;
- (iii) **Optimized Cluster Geometries** (pp. 16-33), displaying ready-to-run *Gaussian-16* input files containing the optimized geometry, vibrational frequencies, and other thermochemical data for all windowpane clusters ${}^{q,t,d}W_n$, together with NBO keyword input to obtain the NRT bond orders and other NBO-based descriptors.
