

# Expression of Hypoxia-Inducible Factor 1 $\alpha$ (HIF-1 $\alpha$ ) and Genes of Related Pathways in Altered Gravity

Johannes Vogel <sup>1,†</sup>, Cora Sandra Thiel <sup>2,3,†</sup>, Svantje Tauber <sup>2,3</sup>, Christian Stockmann <sup>2</sup>, Max Gassmann <sup>1,4,\*</sup> and Oliver Ullrich <sup>2,3,4,5,\*</sup>

**Supplementary Figure S1.** Experiment design of the parabolic flight (19th and 23rd DLR PFC) and suborbital ballistic rocket (TEXUS-49 and TEXUS-51) experiments. **(a)** During the parabolic flight campaigns, U937 or Jurkat T cells were analyzed before and during the first parabola. 1g in-flight control (1g IF) samples were lysed 5 min before the first parabola, 1.8g hypergravity samples at the end of the first 1.8g phase, and microgravity samples at the end of the first microgravity phase. After the flight, 1g ground controls were performed in the experiment hardware inside the aircraft. **(b)** During the suborbital ballistic rocket missions, U937 and Jurkat T cells were lysed at time point T+75 s to monitor the hypergravity and vibration effects of the rocket launch. Microgravity samples and 1g in-flight reference centrifuge control samples (for the TEXUS-51 mission) were lysed after 415s post-launch. Additionally, hardware 1g ground controls were lysed post-flight approximately 15min after the rocket launch. **(c)** In-flight experiment system for parabolic flights on board the Airbus A300 / A310 ZERO-G. **(c1)** Experiment hardware structure which consists of an incubator rack to store the cell containers at 37°C before the experiment (1), an experiment rack, in which all technical aggregates are accommodated for the execution of the experiment and where the living cells are processed during

altered gravity (2), and a cooling rack to store all cell containers at 4°C after the injection of the lysis solution until landing (3). **(d)** In-flight experiment system for the suborbital ballistic rocket flight of the TEXUS-49 and TEXUS-51 payload. TEXUS consists of a VSB-30 engine (not shown) and of the payload structure. Sets of three sterile syringes were filled with cell suspension, medium, and lysis buffer connected by a T-piece with small plugs at the outlet ports to prevent premature contact of the fluids. The syringe systems are accommodated in tempered and vacuum-resistant containers at the static or centrifuge (TEXUS-51) position.

**Supplementary Figure S2.** Cell container designed and used for adherent cells used in the First Swiss Parabolic Flight campaign. (a) Container before packaging. IBIDI-slides containing the cells (1) were incubated for two days to ensure firm adherence of the cells. The inlet of the slides is connected to two syringes one containing cell culture medium (red) and the other fixing solution (colorless). Six sets of these syringe / IBIDI-slide assemblies can be mounted to the container equipped with two release handles (5) that operate six syringes of the same kind simultaneously. The handles have a locking mechanism that ensured that only one handle can be operated at the same time and that only the handle that operates the syringes containing the cell culture medium can be operated first. The outlet of the IBIDI-slides is connected with a tube that directs the waste fluids into a waste compartment (4) that is filled with soaking material (3). Attached to the cover of the container is a gel pad warmed to 37°C (2). (b) All six syringe / IBIDI-slide assemblies fitted into the container, secured in place with a slide holder (6 in (a)) and the outlet tubing guided to the waste compartment filled with the soaking material. (c) Container closed and sealed into a watertight plastic bag (d) as required for security reasons.

**Supplementary Table S1.** List of HIF-related genes. A list of 176 genes relevant for HIF1 signaling was compiled comprising the 100 genes from KEGG database entry hsa04066, “HIF1 signaling pathway - Homo sapiens (human)” ([https://www.genome.jp/dbget-bin/www\\_bget?pathway+hsa04066](https://www.genome.jp/dbget-bin/www_bget?pathway+hsa04066)) and 76 genes which are known from the literature to also interact with HIF1 signaling. These genes are represented by 375 probe sets on the applied NimbleGen arrays based on the hg18 annotation, used for analysis of the human U937 cells. 175 of the 176 genes (one gene was not present on the array) are represented by 184 transcript clusters on the Affymetrix GeneChip® Human Transcriptome Array (Thermo Fisher Scientific, Waltham, MA, USA) used for analysis of the human Jurkat T cells.

**Supplementary Table S2.** Expression fold changes of 175 of the 176 HIF-related genes (one gene was not present on the microarray). The 175 genes are represented by 184 transcript cluster IDs analyzed in human Jurkat T cells exposed to different gravitational conditions during parabolic flight (23rd DLR PFC). The analysis was made with the Affymetrix GeneChip® Human Transcriptome Array (Thermo Fisher Scientific, Waltham, MA, USA).

Gene Symbol	Entrez ID	Transcript Cluster ID	Description	1g IF vs H/W 1g GC		BL-PFC hyp-g vs H/W		BL-PFC hyp-g vs 1g IF		µg vs H/W 1g GC		µg vs 1g IF		µg vs BL-PFC hyp-g

**Supplementary Table S3.** Expression fold changes of 175 of the 176 HIF-related genes (one gene was not present on the microarray). The 175 genes are represented by 184 transcript cluster IDs analyzed in human Jurkat T cells exposed to different gravitational conditions during a suborbital ballistic rocket flight (TEXUS-51). The analysis was made with the Affymetrix GeneChip® Human Transcriptome Array (Thermo Fisher Scientific, Waltham, MA, USA).

Gene Symbol	Entrez ID	Transcript Cluster ID	Description	H/W 1g GC vs CC		BL-TX hyp-g vs H/W 1g GC		1g IF vs BL-TX hyp-g		BL-TX hyp-g vs 1gIF		µg vs 1g IF		1g IF vs H/W 1g GC		µg vs BL-TX hyp-g		ug vs H/W 1g GC

**Supplementary Table S4.** Expression fold changes of 176 HIF-related genes represented by 375 probe set IDs analyzed in human U937 cells exposed to different gravitational conditions during parabolic flight (19th DLR PFC). The analysis was made with the NimbleGen expression microarray based on the hg18 annotation.

Gene Symbol	Entrez Gene ID	Probe set ID	Description	1g IF vs HW 1g GC		BL-PFC hyp-g vs 1g IF		µg vs BL-PFC hyp-g		µg vs 1g IF		BL-PFC hyp-g vs HW 1g GC		µg vs HW 1g GC

**Supplementary Table S5.** Expression fold changes of 176 HIF-related genes represented by 375 probe set IDs analyzed in human U937 cells exposed to different gravitational conditions during a suborbital ballistic rocket flight (TEXUS-49). The analysis was made with the NimbleGen expression microarray based on the hg18 annotation.

Gene Symbol	Entrez Gene ID	Probe set ID	Description	$\mu\text{g}$ vs BL-TX hyp-g		BL-TX hyp-g vs HW 1g GC		$\mu\text{g}$ vs HW 1g GC
