

Figure S1. Upregulation of TIMP2 expression in OCT-treated BON cells. BON cells were challenged with either vehicle (Veh) or OCT (1 μ M) for 24 h, followed by RNA isolation and qPCR analysis. The data shown are the means \pm SD from three assays ($n = 3$). Veh control cells are set arbitrarily at 1.0. The asterisk (*) denotes a significant difference ($p < 0.05$, Wilcoxon test).
