

Supplementary Materials for
Novel concept of alpha satellite Cascading Higher Order Repeats (HORs)
and exemplification of active 15mer Cascading HOR in T2T-CHM13
assembly of human chromosome 15

Matko Glunčić, Ines Vlahović, Marija Rosandić, Vladimir Paar

Corresponding author: matko@phy.hr

The Supplementary file includes:

Figs. S1 to S4

Tables S1 to S5

Figure S1. Willard's type 18mer alpha satellite HOR alignment (hor01). Start position 14,699,937 bp and end position 14,737,927 bp in T2T-CHM13. The numbers on the left side indicate the initial position of the first monomer in each HOR copy.

Figure S2. (separate file) Willard's type 25mer/26mer alpha alpha satellite HOR alignment (hor02). Start position 15,417,939 bp and end position 15,692,443 bp in T2T-CHM 13. The numbers on the left side indicate the initial position of the first monomer in each HOR copy.

Figure S3. (separate file) Cascading 15mer alpha satellite HOR alignment (hor03). Start position 16679039 bp and end position 17,683,163 bp in T2T-CHM 13. The numbers on the left side indicate the initial position of the first monomer in each HOR and SubHOR copy.

Figure S4. (separate file) Cascading 20mer alpha satellite HOR alignment (hor04). Start position 15,993,645 bp and end position 16,555,446 bp in T2T-CHM 13. The numbers on the left side indicate the initial position of the first monomer in each HOR and SubHOR copy.

Table S1. Number of 15mer variant HOR copies in hor03 array. Labels for individual variants of HOR copies are provided in Figure Fig. 3C.

Variant HOR copy	No
a	279
a'	62
a*	4
b	5
b'	1
c	16
c'	21
d	7
d'	13
e	17
f	4
Total	429
