			BB vs. AA	178	745	1.33 (0.28-6.31)	0.719	0.010	78.2

\* If p (Q) was  $\geq 0.05$  and  $I^2$  value  $< 50\%$ , the fixed-effect model was chosen, otherwise a random-effect model was used.

NTG: normal tension glaucoma; SNP: single nucleotide polymorphism; OR: odds ratio; CI: confidence interval; *MTHFR*: 5,10-methylenetetrahydro-folate reductase; *OPA1*: Optic atrophy 1.
