1. Morphologies of AuNPs, AuNSs, and AuNPs/AuNSs complexes

Figure S1. TEM images of (A) AuNPs, (B) AuNSs, and (C) AuNPs/AuNSs complexes.

2. Time-dependent extinction spectra of the water/BuOH solution

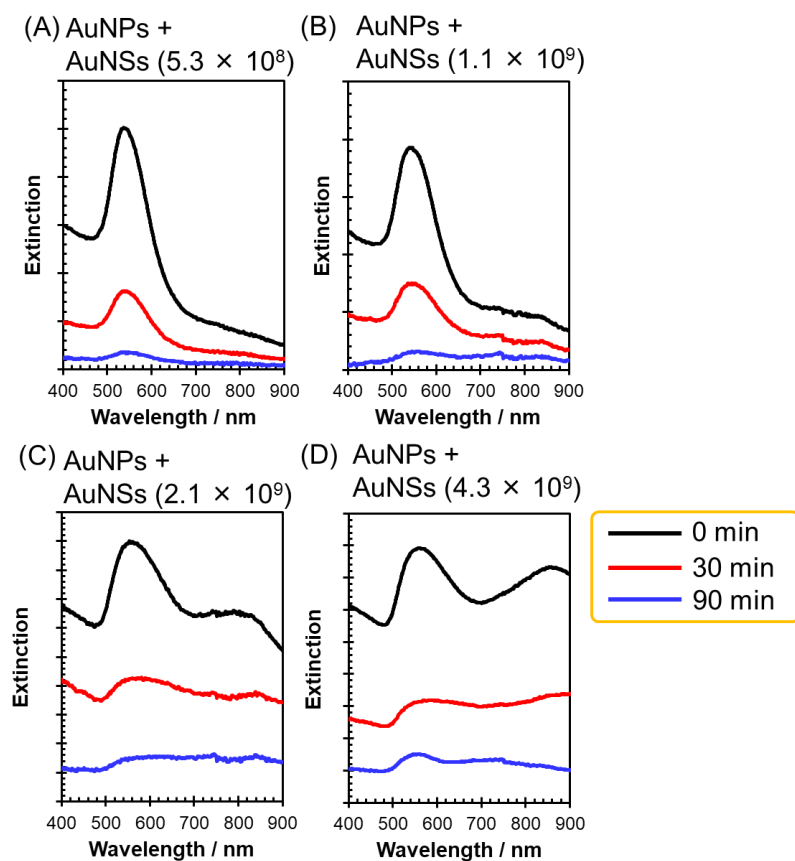

Figure S2. Time-dependent extinction spectra of the water/BuOH solution containing AuNSs (quantity: 5.5×10^{11}) and AuSTs (quantity: (A) 5.3×10^8 , (B) 1.1×10^8 , (C) 2.1×10^9 , (D) 4.3×10^9).

3. Comparison of morphologies through AFM observations between individual AuNPs and AuNSs, and AuNP/AuNS-in-assemblies

The dispersed AuNPs and AuNSs immobilized on quartz substrates (Figure S3(A) and (B)) were prepared utilizing electrostatic interactions between the quartz substrate modified with polymer electrolytes and these nanoparticles, following previous reports.^{S1} From the cross-sectional analysis of these nanoparticles, the average height profiles of AuNPs and AuNSs were determined to be 43 ± 3.2 nm and 95 ± 9.0 nm, respectively. It was observed that the average height profiles of the dispersed materials in AuNPs assemblies (Figure S3(C): 143 ± 4.6 nm and (D): 152 ± 12 nm) were significantly larger than these values.

(A) AuNPs-immobilized

(B) AuNSs-immobilized

(C) AuNPs + AuNSs (5.3×10^8)

(D) AuNPs + AuSTs (1.1×10^9)

Figure S3. AFM images and cross-sectional analyses for (A) AuNPs-immobilized quartz substrate, (B) AuNSs-immobilized quartz substrate, (C) AuNPs + AuNSs(5.3×10^8), and (D) AuNPs + AuNSs(1.1×10^9).

4. Peak assignments of SERRS spectrum of ICG-modified AuNP/AuNS-in-assemblies

Figure S4. Peak assignments of SERRS spectrum of ICG-modified AuNP/AuNS-in-assemblies, which were obtained from a colloidal solution containing AuNPs and 1.1×10^9 AuNSs.

5. Chemical robustness (stability against solvents) of the AuNP/AuNS-in-assemblies

Figure S5. (A) Extinction spectra of AuNP/AuNS-in-assemblies obtained from a colloidal solution containing 5.5×10^{11} AuNPs and 1.1×10^9 AuNSs. The spectra are shown for the assemblies immediately after preparation (as-prepared) and after washing with toluene, water, and ethanol. (B) The picture images show the assemblies immediately after preparation (as-prepared) and after washed with toluene, water, and ethanol.
