Tsu_sodA_R	TAGGC GGCGTGGTGCTTGT	RT-qPCR analyses
Tsu_ahpC_F	TCAGCACCATGGAGTGACACTG	RT-qPCR analyses
Tsu_ahpC_R	AACTCCTTGGCGCTCGAG	RT-qPCR analyses

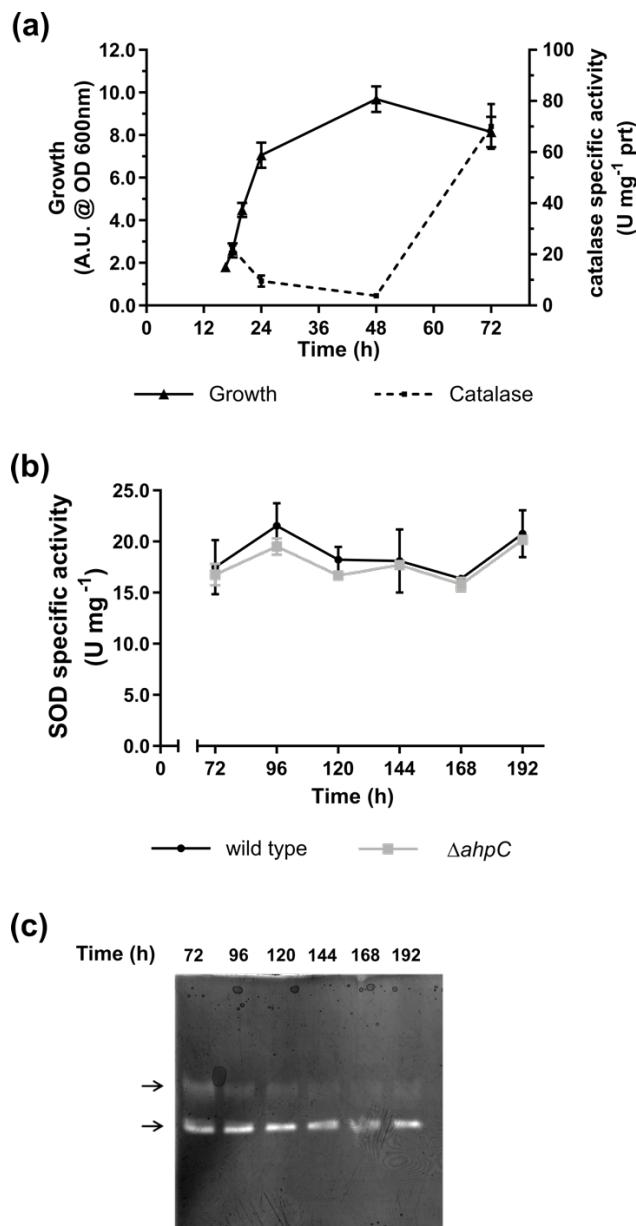

Figure S1. Characterization of *S. tsukubaensis* cultures. **(a)** Growth curve (solid line) and catalase specific activity (dashed line) of *S. tsukubaensis* wild type grown in YEME medium. Note that growth in YEME medium is faster than in MGm-2.5 medium (see Figure 1a) and that stationary phase occurs earlier. **(b)** SOD specific activity of *S. tsukubaensis* wild type (black line) and *S. tsukubaensis* $\Delta ahpC$ (grey line) grown in MGm-2.5 medium. Vertical bars indicate standard deviation of the mean values. No significant differences ($p > 0.05$) between the wild type and $\Delta ahpC$ were identified (t-test with Holm-Sidak correction for multiple comparisons). Results are the average of at least three independent experiments. **(c)** Native-PAGE of *S. tsukubaensis* cells extracts (50 μ g total protein per lane) stained for SOD activity. Arrows indicate the two protein bands that display SOD activity.

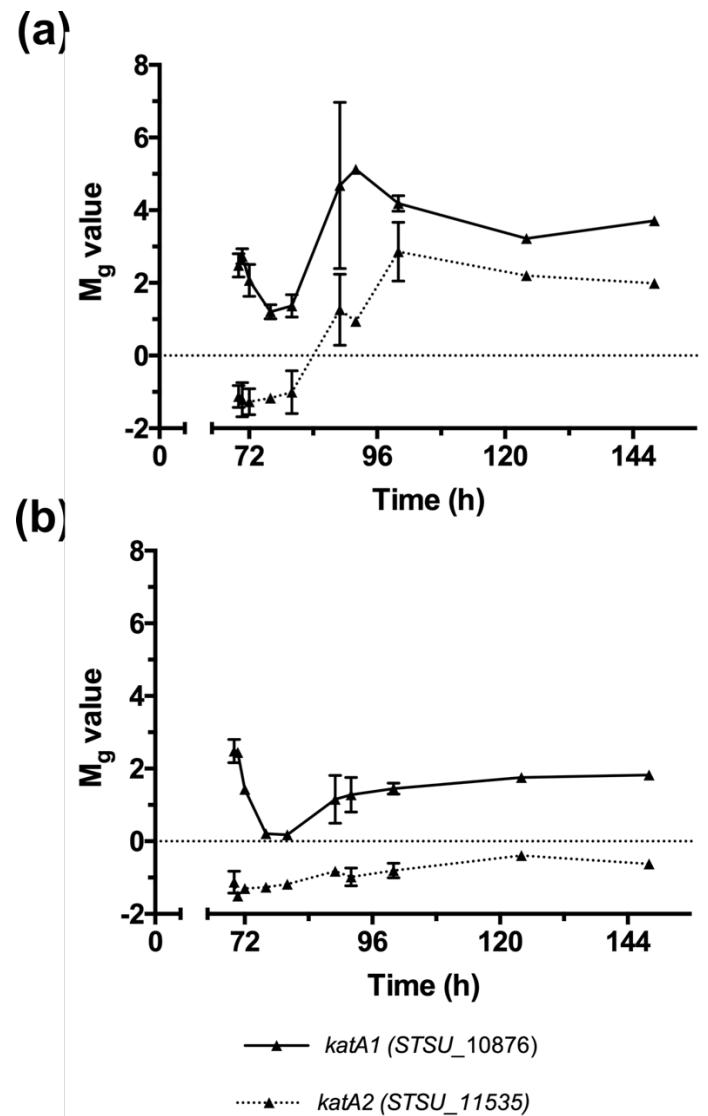

Figure S2. Transcriptional profiles of the catalase encoding genes. Mg values (\log_2 transcription) of *katA1* (solid line) and *katA2* (dotted line) genes in *S. tsukubaensis* wild type grown in **(a)** tacrolimus producing conditions (maltose added cultures) and **(b)** tacrolimus non-producing conditions (glucose added cultures). Data was retrieved from the GSE99752 dataset described in detail in [1].

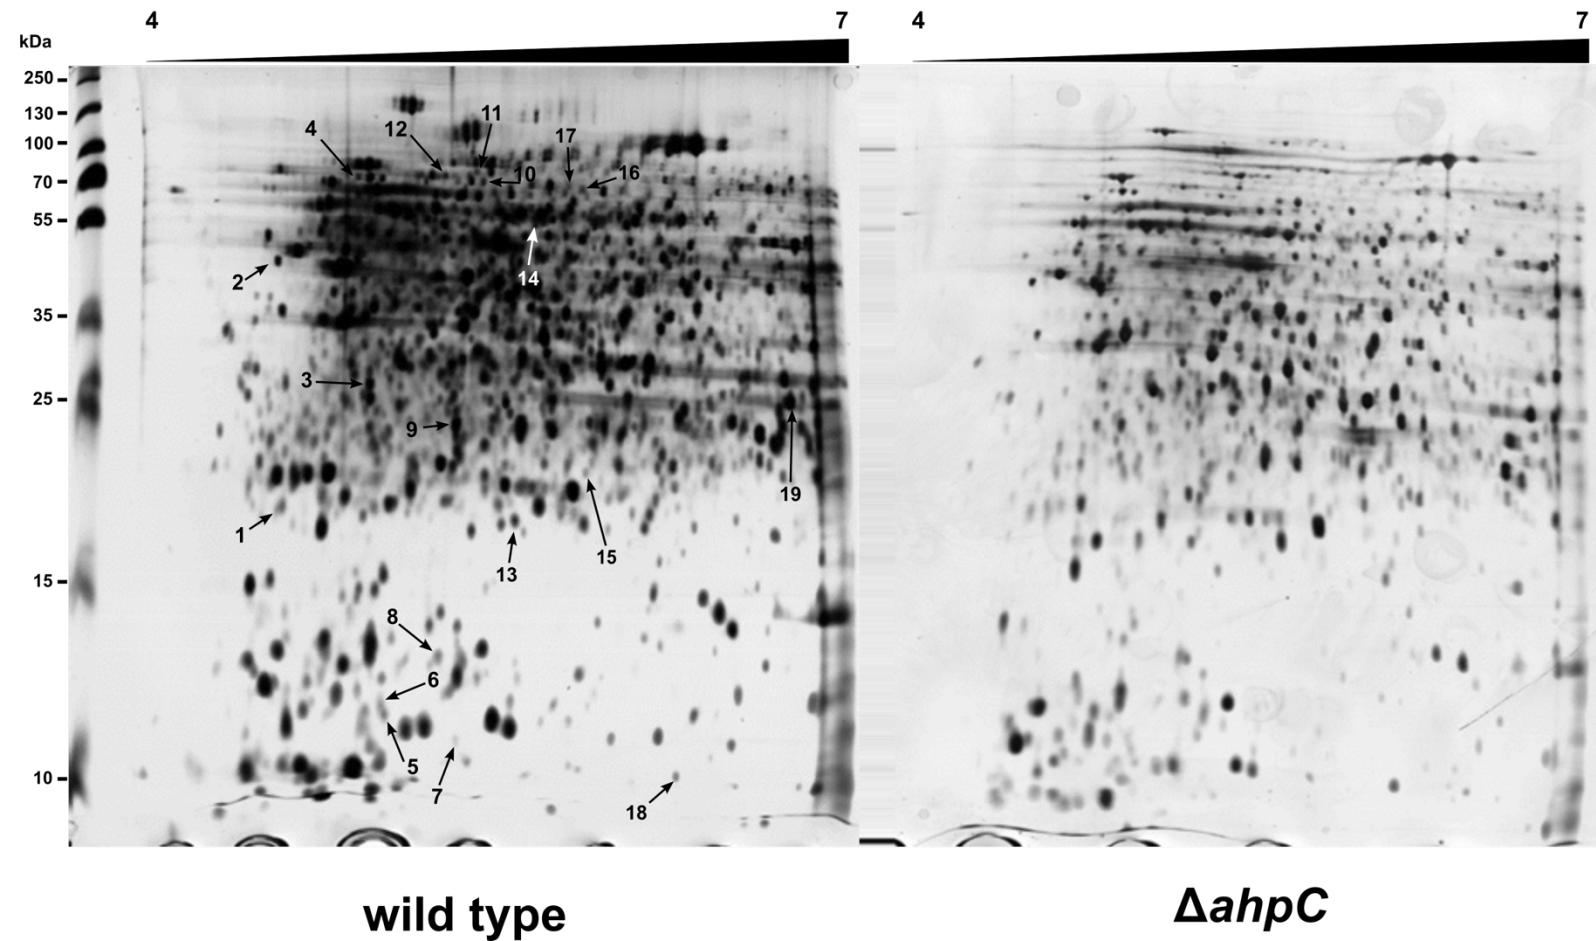

Figure S3. Comparative 2D gel electrophoresis of protein extracts of *S. tsukubaensis* wild type and $\Delta ahpC$ strains at 72h of growth. Protein spots identified by PMF-MS/MS are indicated by an arrow. pH range is indicated on top of the gel. M - molecular weight. Fold variations in Table 1 reflect the 2D-gel analysis of three independent experiments.

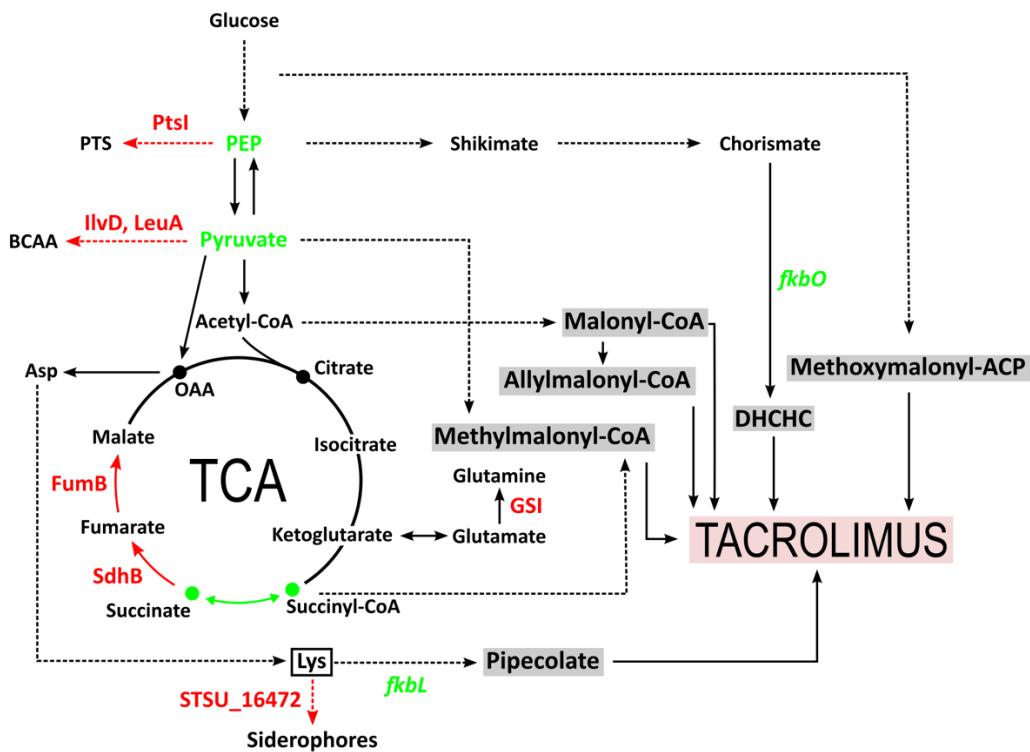

Figure S4. Schematic representation of the pathways affected in *S. tsukubaensis* $\Delta ahpC$ when compared to the wild type strain. Combined, the proteomic and RT-qPCR results suggest an increased availability of tacrolimus biosynthetic precursors in *S. tsukubaensis* $\Delta ahpC$ strain. Red - down-regulation; green - up-regulation.
