

**Supplementary Materials:**

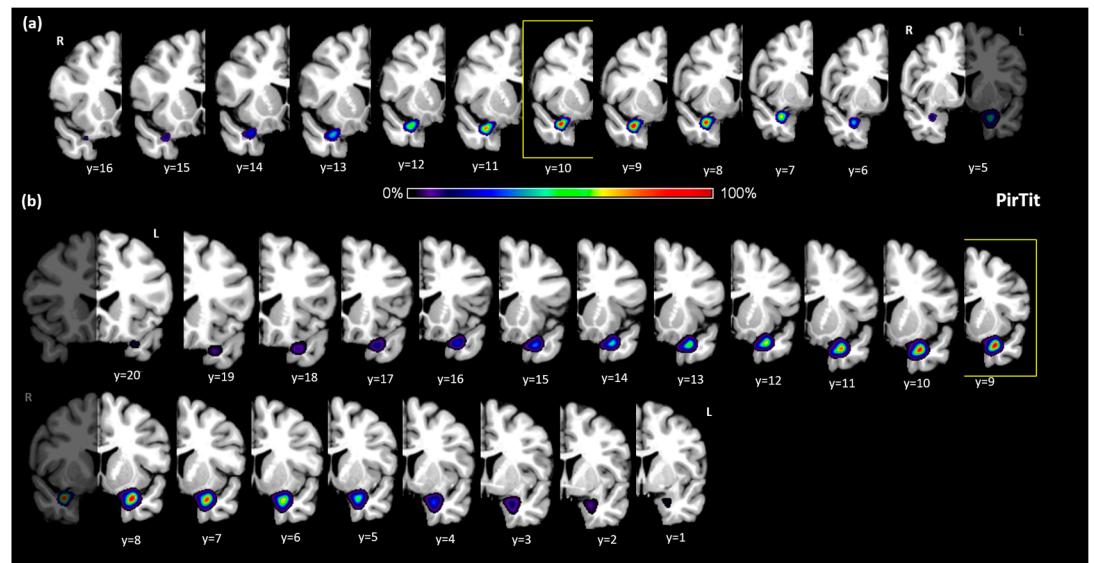

**Figure S1.** Probabilistic map of PirTBd throughout its rostro-caudal extent in the MNI Colin 27 reference space: (a) In the right; (b) In the left hemisphere. Section with the center of mass y-coordinate is framed in the right ( $y=7$ ) and left ( $y=6$ ) hemisphere. Color bar reflects a probability of the area in a particular voxel of the section. L—left hemisphere, R—right hemisphere

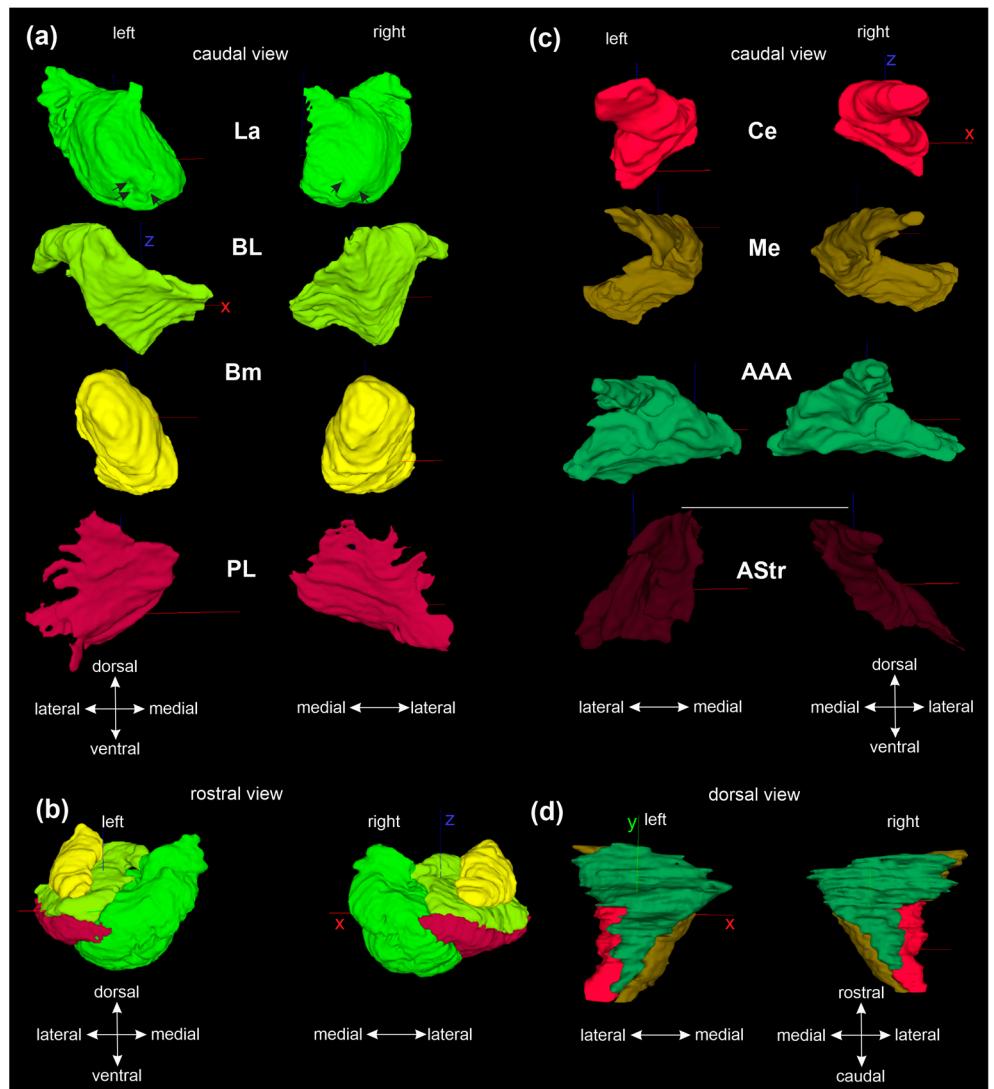

**Figure S2.** Probabilistic map of PirTBv throughout its rostro-caudal extent in the MNI Colin 27 reference space: (a) In the right; (b) In the left hemisphere. Section with the center of mass y-coordinate is framed in the right ( $y=8$ ) and left ( $y=6$ ) hemisphere. Color bar reflects a probability of the area in a particular voxel of the section. L—left hemisphere, R—right hemisphere.

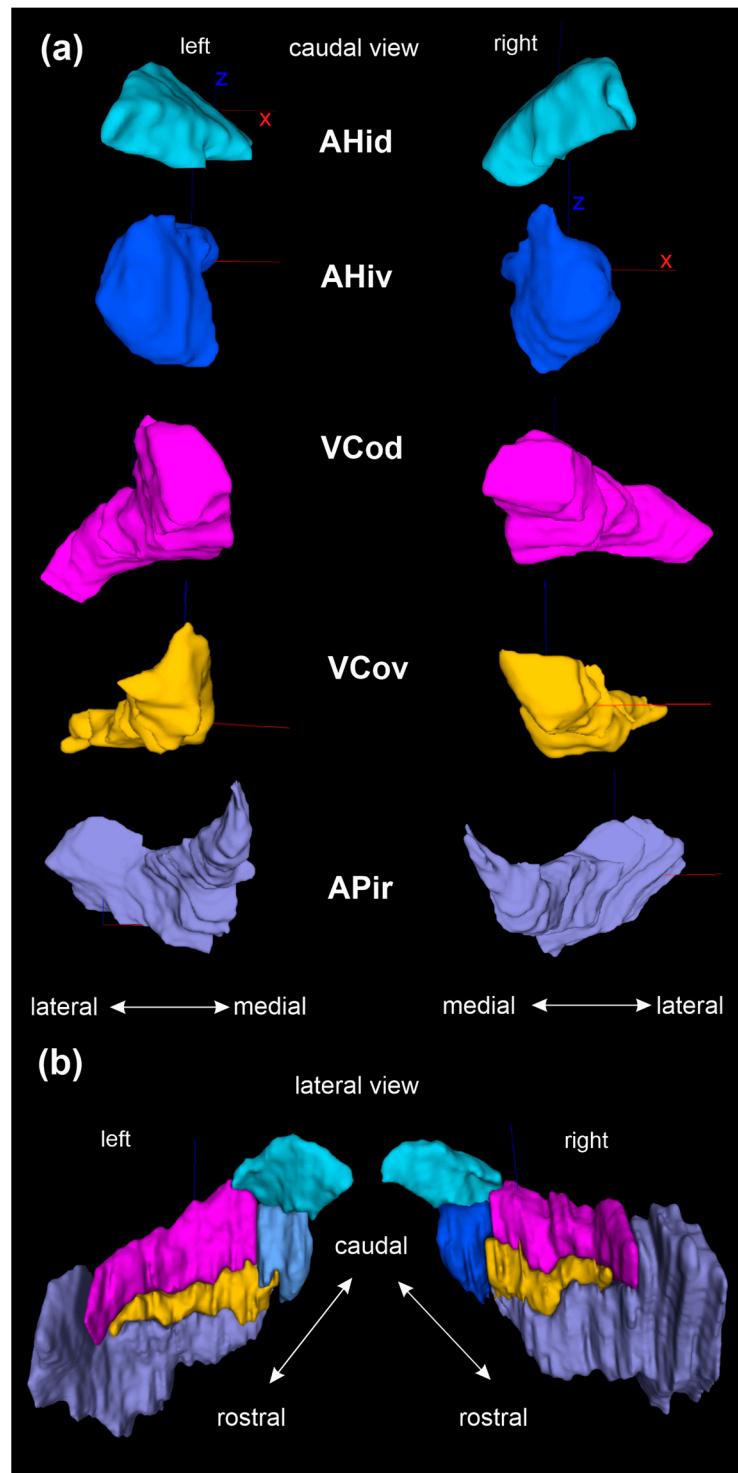

**Figure S3.** Probabilistic map of PirTu throughout its rostro-caudal extent in the MNI Colin 27 reference space: (a) In the right; (b) In the left hemisphere. Section with the center of mass y-coordinate is framed in the right ( $y=9$ ) and left ( $y=6$ ) hemisphere. Color bar reflects a probability of the area in a particular voxel of the section. L—left hemisphere, R—right hemisphere.

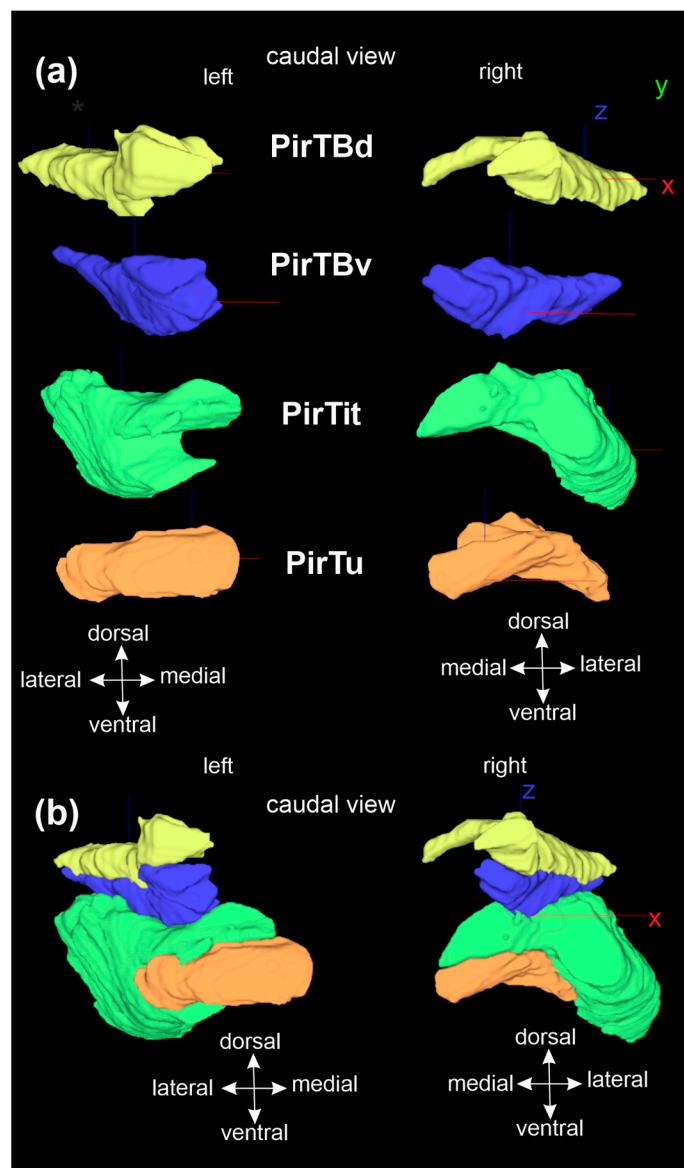

**Figure S4.** Probabilistic map of PirTit throughout its rostro-caudal extent in of the MNI Colin 27 reference space: (a) In the right; (b) In the left hemisphere. Section with the center of mass y-coordi-nate is framed in the right ( $y=10$ ) and left ( $y=9$ ) hemisphere. Color bar reflects a probability of the area in a particular voxel of the section. L—left hemisphere, R—right hemisphere.

**Figure S5.** 3D reconstructions of the amygdala in the BigBrain in both hemispheres: (a) Subdivisions of the laterobasal amygdala; (b) The entire laterobasal group; (c) Subdivisions of the centromedial amygdala and the amygdalostriatal transition zone; (d) The entire centromedial group. Subdivisions in the groups have the same colors as in (a) and (c). Stereotaxic x (red), y (green) and z coordinates (blue). Arrows in lateral nucleus (La) indicate recesses on the surface, associated with places of contact with the granular part of the paralaminar nucleus. Abbreviations in (a) (from top to bottom): La—lateral nucleus, BL—basolateral nucleus, Bm—basomedial nucleus, PL—paralaminar nucleus; Abbreviations in (c) (from top to bottom): Ce—central nucleus, Me—medial nucleus, AAA—anterior amygdaloid area; AStr—amygdalostriatal transition zone.

**Figure S6.** 3D reconstructions of the amygdala in the BigBrain in both hemispheres: **(a)** Subdivisions of the superficial amygdala; **(b)** The entire superficial group. Subdivisions within the groups have the respective colors as in (a). Stereotaxic x (red), y (green) and z coordinates (blue). Abbreviations (from top to bottom): AHid—amygdalohippocampal transition area, dorsal part; AHiv—amygdalohippocampal transition area, ventral part; VCod—ventral cortical nucleus, dorsal part; VCov—ventral cortical nucleus, ventral part; APIr—amygdalopiriform transition area.

**Figure S7.** 3D reconstructions of the mesial piriform cortex in the BigBrain in both hemispheres: **(a)** Subdivisions, and **(b)** The entire region. Subdivisions within the region have the respective colors as in (a). Stereotaxic x (red), y (green) and z coordinates (blue). Abbreviations in (a): PirTBd—piriform temporobasal area, dorsal part, PirTBv—piriform temporobasal area, ventral part, PirTit—piriform temporal area (Incisura temporalis), PirTu—piriform temporal area (uncus).

**Table S1.** The Initial Eigenvalues and Extraction Sums for first three factors (IF1-IF3) out of 21 at the initial point of analysis.

IF	Initial Eigenvalues			Extraction Sums of Squared IF Loadings				Kruskal-Wallis Test
	Total	% of variance	Cumulative %	Total	% of variance	Cumulative %	P value	
1	11.433	54.442	54.442	11.433	54.442	54.442	< 0.001	
2	6.351	30.245	84.687	6.351	30.245	84.687	< 0.001	
3	1.253	5.966	90.653	1.253	5.966	90.653	< 0.001	

\* Extraction Sums of Squared Loadings represent eigenvalues (greater than 1) associated with these factors extracted in the analysis (that results in 3 factors).

**Table S2.** Relation of modified Haralick's features to first three factors derived in PCA

Modified Haralick's features	IF1	IF2	IF3
Homogeneity	0.994		
InverseDifference	0.992		
DifferenceAverage	0.991		
Dissimilarity	0.990		
Correlation	0.975		
InformationMeasureOfCorrelation2	0.974		
DifferenceEntropy	0.970		
DifferenceVariance	0.963		
Contrast	0.959		
MaximalCorrelationCoefficient	0.954		
Entropy	0.872		0.321
InformationMeasureOfCorrelation1	0.737		0.402
sumVariance		0.986	
clusterProminence		0.967	
autoCorrelation		0.959	
sumOfSquaresVariance		0.953	
clusterShade		0.945	
sumAverage		0.933	
sumEntropy		0.816	
Energy	0.509		0.705
MaximumProbability	0.523		0.564

\* The features are arranged in the order to present the highest values for the IF1 and IF2 – most important contributors to the factors – in the upper rows. The table present only values which are higher than 0.3.
