Message from the Guest Editors

Dear Colleagues,

Rural development is one of the most complex topical research issues, demanding complex interdisciplinary research proposing multifunctional sustainable economic development models based on theoretical and empirical studies underscoring socio-economic indicators which may improve policy approaches to analysis evaluation and decision making.

This Special Issue on *Economic Indicators Relating to Rural Development* invites researchers to submit theoretical or empirical papers focusing on topics related to rural development indicators, models, or case studies; the sustainable socio-economic development of worldwide rural regions regardless of their scale; rural development policies and the role of decision makers and other stakeholders in addressing challenges in sustainable rural development; community engagement in linking agriculture with other economic sectors (e.g., tourism); etc. We welcome your contributions, including, but not limited to, the above directions.
